- ◀The largest R&D and manufacturing base of high voltage switchgear and complete equipment in China.
- ◆ China's high voltage switchgear technology leader with the world's leading technology level.
- ◆The world's first 1,100 kV high voltage switchgear manufacturer.
- ◀The equipment integrator engaged in investigation, design and production.
- ■With the internationally advanced industrial park and the world-leading modern product line.
- ◆Devoted to providing the integrated solution for various industries such as power, railway, coal, oil, new energy and urban mass transit
- ◀Innovative lease business model, shifting from manufacturing to operation.

Devotes to providing the users with

## fast, flexible and reliable

integrated solutions for mobile substations

•••

## SOLUTIONS FOR MOBILE SUBSTATIONS

#### **OVERVIEW**

The mobile substation is integrated with high voltage switchgear, transformer, medium voltage switchgear and secondary system in the transport vehicle, the integrated equipment with all substation functions, and can be rapidly transported to the electricity utilization site. After arriving at the site, they can be put into operation after the necessary commissioning and test.

#### **PRODUCT**

- **◄**Strong maneuverability
- ◀High reliability
- ◀Rapid deployment
- **◄**Economical

#### SCOPE OF APPLICATION

- **◄**Emergency power supply
- OTemporary capacity expansion
- Emergency substation
- ◀Medium and long term power supply
- OSubstation maintenance
- Substation expansion
- **O**Fixed substation

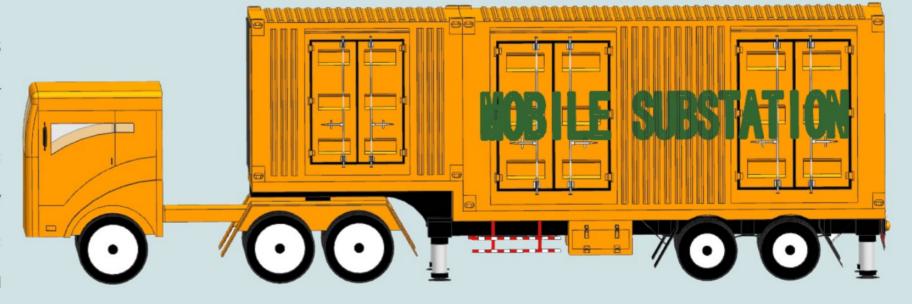

#### **TYPICAL SOLUTIONS**

- ■Emergency power supply
- OSolution I: 33 kV /15 MVA mobile substation
- ◀Emergency power supply/Medium and long term power supply.
- OSolution II: 132kV (66kV) /20MVA mobile substation
- ◀Medium and long term power supply
- OSolution III: 132kV (66kV) /40MVA mobile substation(HGIS)
- OSolution IV: 132kV (66kV)/40MVA mobile substation(AIS)
- OSolution V: 230kV /50MVA mobile substation

# **OVERVIEW OF THE SOLUTION**

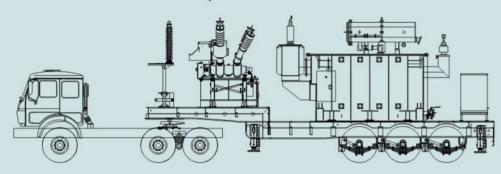

- ■Transformer capacity: 10 MVA; voltage class: 33kV/15kV.
- Single circuit line transformer unit wiring is adopted for 33 kV, the HGIS
  or switch cabinet equipment can be selected.
- ◆Single-bus configuration is adopted for 15kV, and4 circuits of feeder lines are arranged.
- ◆Transformation vehicle module: 33kV HGIS, TR and LA.
- $\blacksquare$  Dimensions (L \* W): 10.5m  $\times$  3 m; radius of turning circle (including the head): 7m.
- Distribution vehicle module:15kVpower distribution equipment and secondary system equipment.
- $\blacksquare$  Dimensions (L \* W): 10.5m  $\times$  3 m; radius of turning circle (including the head): 7m.
- ◀The total height of vehicle body and equipment complies with the national road transport provisions.

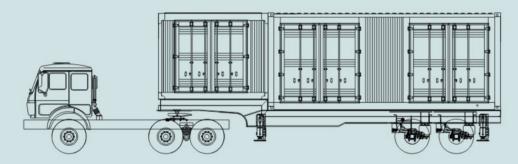

### **EMERGENCY POWER SUPPLY – SOLUTION I:** 33kV(10MVA) MOBILE SUBSTATION

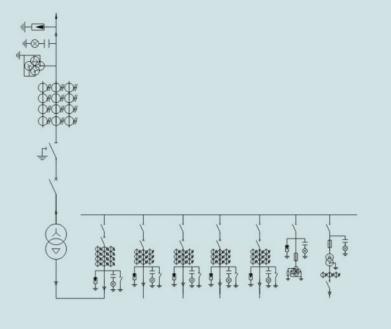

Layout of Distribution Vehicle

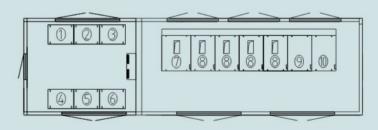

#### SOLUTION CONFIGURATION

- **◀**Tansformer
- ●Model: SZ-10000/33
- The compact design reduces the boundary dimensions.
- The internal part of transformer is of damping structure.
- ◀33kV switchgear
- Gas-insulated miniaturized switchgear, effectively preventing the influence of fouling and moisture.
- Cabinet-type switch is fully insulated, fully sealed and maintenance-free.
- Cabinet-type switch adopts modular design, the connection can be used for quick release mode, such as prefabricated optical cables and prefabricated power cables.
- ◀15kV switch cabinet
- ●15kV switch cabinet can be box-type fixed switchgear or gas insulated cabinet.
- It has high mechanical strength that can meet the requirement for long distance carriage.

#### Main electrical connection

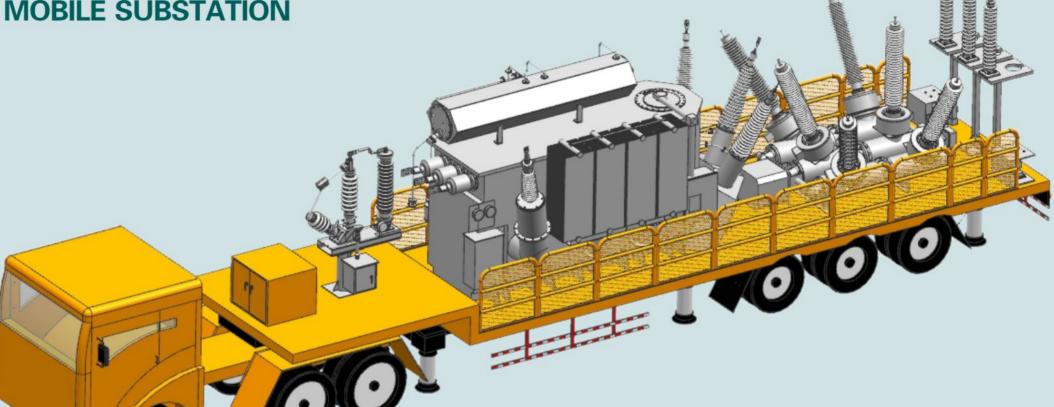

- 1 Comunication panel
- 2 Monitoring panel
- 3 Main transformer protection panel
- 4 Auxiliary system panel
- 5DC panel
- 6 Power supply panel
- 7 Incoming cabinet
- 8 Outgoing cabinet
- 9PT cabinet
- 10 Station transformer cabinet
- The quick release cables are used for wiring, and the wiring is flexible.
- Professional maintenance platform is arranged for facilitating the repair, operation maintenance.
- ◀Transport vehicle
- The low slab or high slab transport vehicle can be selected.
- The leaf spring suspension system, hydraulic suspension system or air suspension system can be selected.
- Relevant matters, such as vehicle announcement and license can be handled according to the requirements.
- ◆Optional accessories
- ©3D impact recorder 

  ©Motor-driven cable reel
- ●Firefighting apparatus ●Mobile lightning conductor
- Lifting light and video monitoring system
- ●Oil chromatography on-line monitoring system
- ●SF<sub>6</sub> status on–line monitoring system
- Working ladder
- ●SF<sub>6</sub> filling and deflating device
- Telescopic fence

EMERGENCY POWER SUPPLY/MEDIUM AND LONG TERM POWER SUPPLY-SOLUTION II: 132kV(66kV)/20MVA MOBILE SUBSTATION

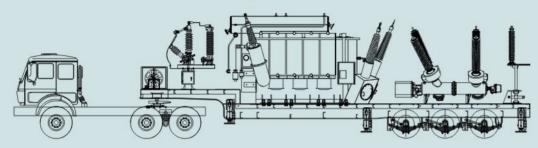

# **OVERVIEW OF THE SOLUTION**

- ■Transformer capacity: 20 MVA; voltage class: 132kV(66kV)/15kV.
- Single circuit line transformer unit wiring is adopted for 132kV(66kV), the HGIS/GIS equipment is selected, and the complete outdoor arrangement is selected.
- ■Single-bus configuration is adopted for 15kV, and 4~6 circuits of feeder lines are arranged.
- ◆ Transformation vehicle module: 132kV(66kV) HGIS, TR ,LA,neutral—point device and motor—driven cable reel.
- $\blacksquare$  Dimensions (L \* W): 13 m  $\times$  3 m; radius of turning circle (including the head): 10.5 m.
- Distribution vehicle module:15kV power distribution equipment,secondary system equipment and motor—driven cable reel.
- $\blacksquare$  Dimensions (L \* W): 13 m  $\times$  3 m; radius of turning circle (including the head): 10.5 m.
- ◀ The total height of vehicle body and equipment complies with the national road transport provisions.

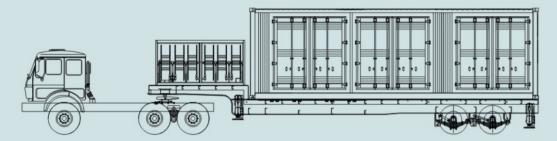

### EMERGENCY POWER SUPPLY/MEDIUM AND LONG TERM POWER SUPPLY-SOLUTION II: 132kV(66kV)/20MVA MOBILE SUBSTATION

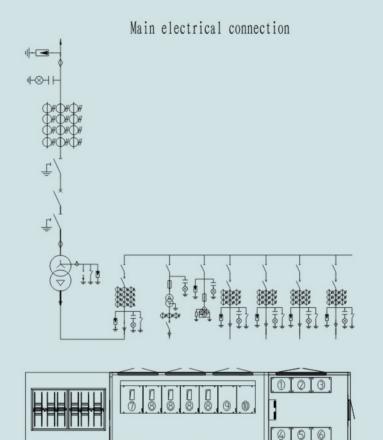

Layout of Distribution Vehicle

### SOLUTION CONFIGURATION

- **◀**Transformer
- OModel: SFZ-20000/132kV(66kV)
- Air-cooled transformer is selected to reduce the overall dimensions.
- The compact design reduces the boundary dimensions.
- The internal part of transformer is of damping structure.
- The transformer bushing is a compound insulation bushing, which reduces the weight.
- Transformer bushing and iron core are of reinforced design.
- ©3D impact recorder is installed.
- ◀132kV(66kV) high voltage switchgear
- High voltage switchgear is characterized with SF<sub>6</sub> insulation, high electrical performance and large safety margin.
- It is of the integral seal design, waterproof and dampproof, the equipment materials and coating are corrosion resistant and foul resistant. It is suitable for multi-regional and long-time transportation.
- The height of support is lowered, the equipment is of miniaturization design, the weight is light, the installation and transportation are convenient.

- 1 Comunication panel
- 2 Monitoring panel
- 3 Main transformer protection panel
- 4 Auxiliary system panel
- 5DC panel
- 6 Power supply panel
- 7 Incoming cabinet
- 8 Outgoing cabinet
- 9PT cabinet
- 10 Station transformer cabinet

• Firefighting apparatus

12

- Flexible connection mode: optional overhead or cable terminal.
- ◀15kV switch cabinet
- ●15kV switch cabinet can be box-type fixed switchgear or gas insulated cabinet.
- It has high mechanical strength that can meet the requirement for long distance carriage.
- The quick release cables are used for wiring, and the wiring is flexible.
- Professional maintenance platform is arranged for facilitating the repair and operation maintenance.
- ◀Transport vehicle
- The low slab or high slab transport vehicle can be selected.
- The leaf spring suspension system, hydraulic suspension system or air suspension system can be selected.
- Relevant matters, such as vehicle announcement and license can be handled according to the requirements.
- **◄**Optional accessories
- OMotor-driven cable reel
- Lifting light and video monitoring system
- Working ladder
- ●Oil chromatography on–line monitoring system
- Telescopic fence
- OSF<sub>6</sub> filling and deflating device
- Mobile lightning conductor
- ●SF<sub>6</sub> status on–line monitoring system

Communication and background monitoring system

MEDIUM AND LONG TERM POWER SUPPLY-SOLUTION III: 132kV(66kV)/40MVA MOBILE SUBSTATION(HGIS)

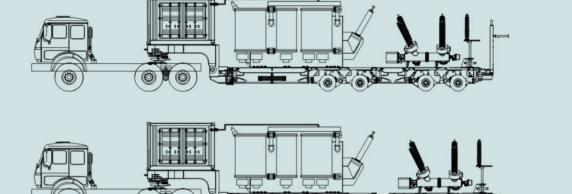

# OVERVIEW OF HE SOLUTION

- ◆Transformer capacity: 40 MVA; voltage class: 132kV(66kV)/15kV.
- Single circuit line transformer unit wiring is adopted for 132kV(66kV), the
  HGIS/GIS equipment is selected, and the complete outdoor arrangement is
  selected.
- ■Single-bus configuration is adopted for 15kV, and 4 ~ 10 circuits of feeder lines are arranged.
- ◆Transformation vehicle module: 132kV(66kV) HGIS, TR, LA.
- $\blacksquare$  Dimensions (L \* W): 16 m  $\times$  3 m; radius of turning circle (including the head): 13 m.
- ◆ Distribution vehicle module: 15kV power distribution equipment and secondary system equipment.
- ODimensions (L \* W): 13 m \* 3 m; radius of turning circle (including the head): 10.5 m.
- ◀ The total height of vehicle body and equipment complies with the national road transport provisions.

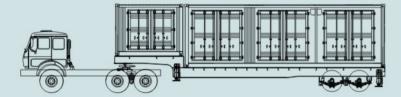

# MEDIUM AND LONG TERM POWER SUPPLY-SOLUTION III: 132kV(66kV)/40MVA MOBILE SUBSTATION(HGIS)

Layout of Distribution Vehicle

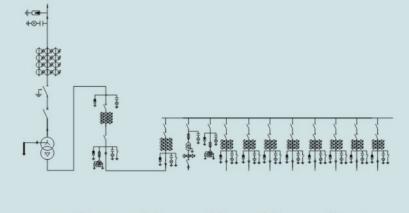

# SOLUTION CONFIGURATION

- **◀**Transformer
- Model: SFZ-40000/132kV(66kV)
- Air-cooled transformer is selected to reduce the overall dimensions.
- The compact design reduces the boundary dimensions.
- The internal part of transformer is of damping structure.
- The transformer bushing is a compound insulation bushing, which reduces the weight.
- Transformer bushing and iron core are of reinforced design.
- ©3D impact recorder is installed.
- ◀132kV(66kV) high voltage switchgear
- High voltage switchgear is characterized with SF<sub>6</sub> insulation, high electrical performance and large safety margin.
